that sounds great!

that sounds great!
but...?

what are some challenges with DevOps?

80%

Platform is a product

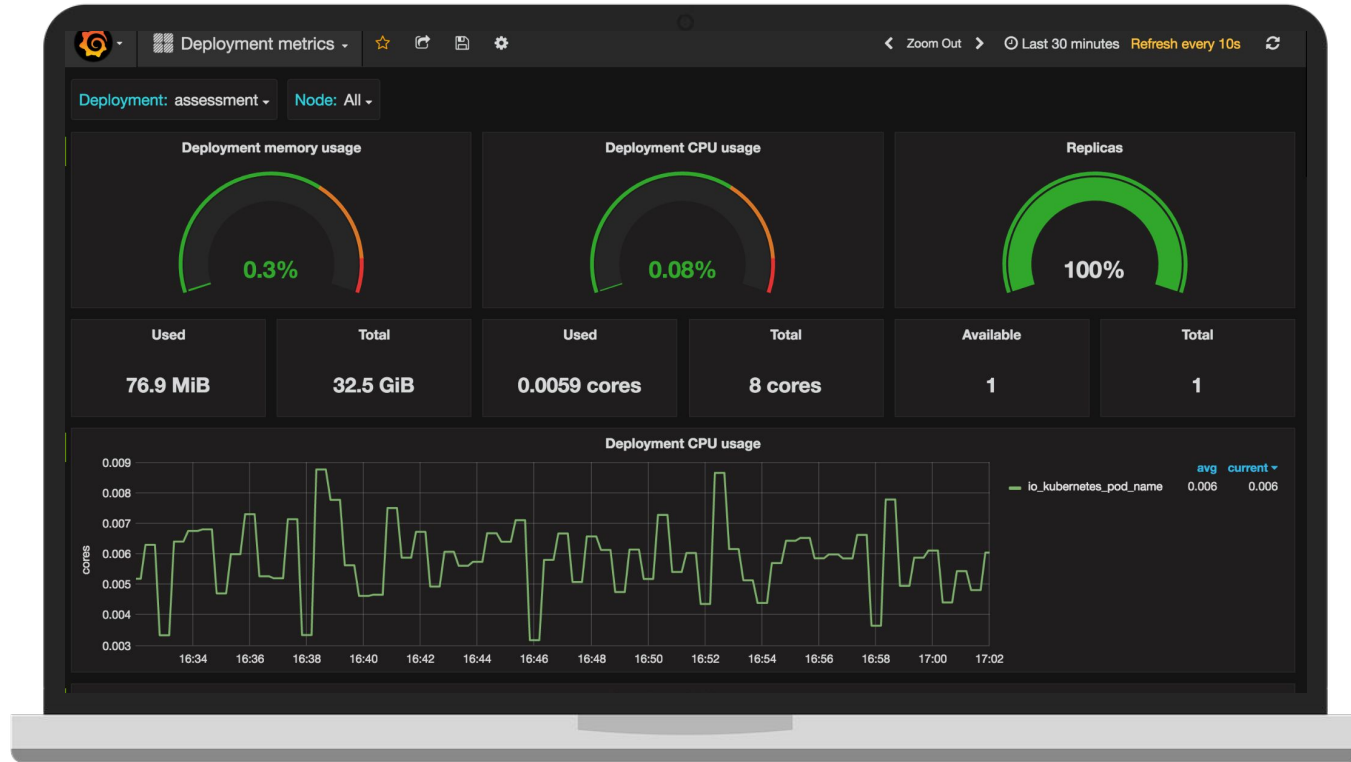

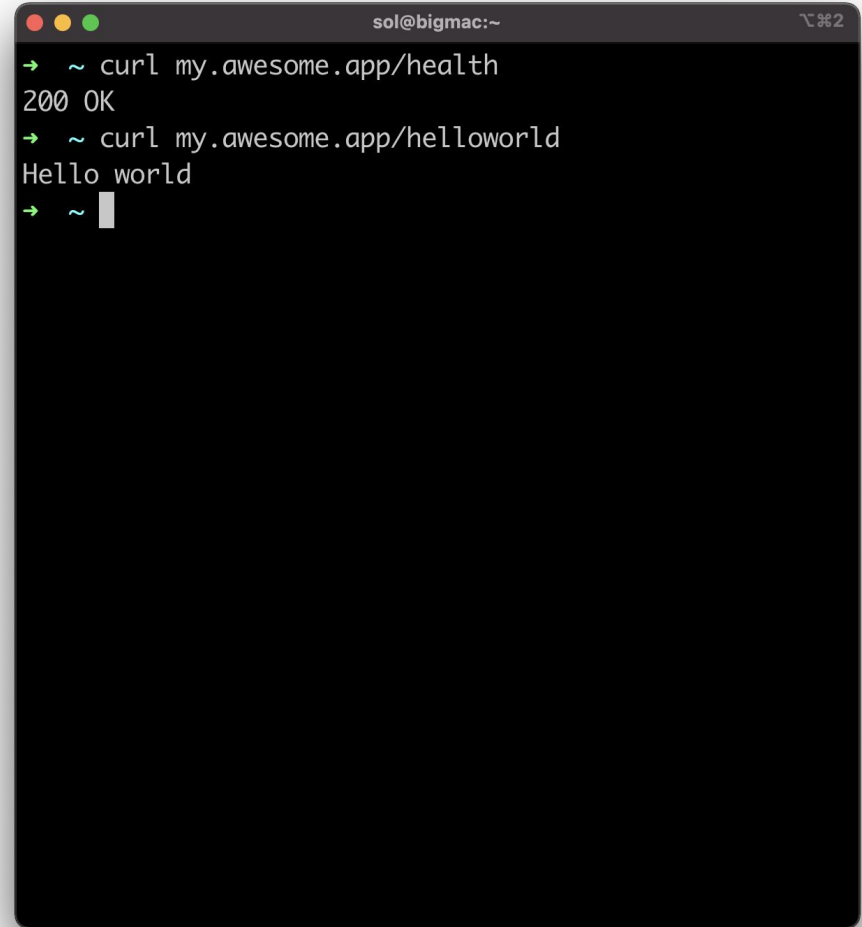

what can an **empowering** DevOps team look like?

zero investment dashboards

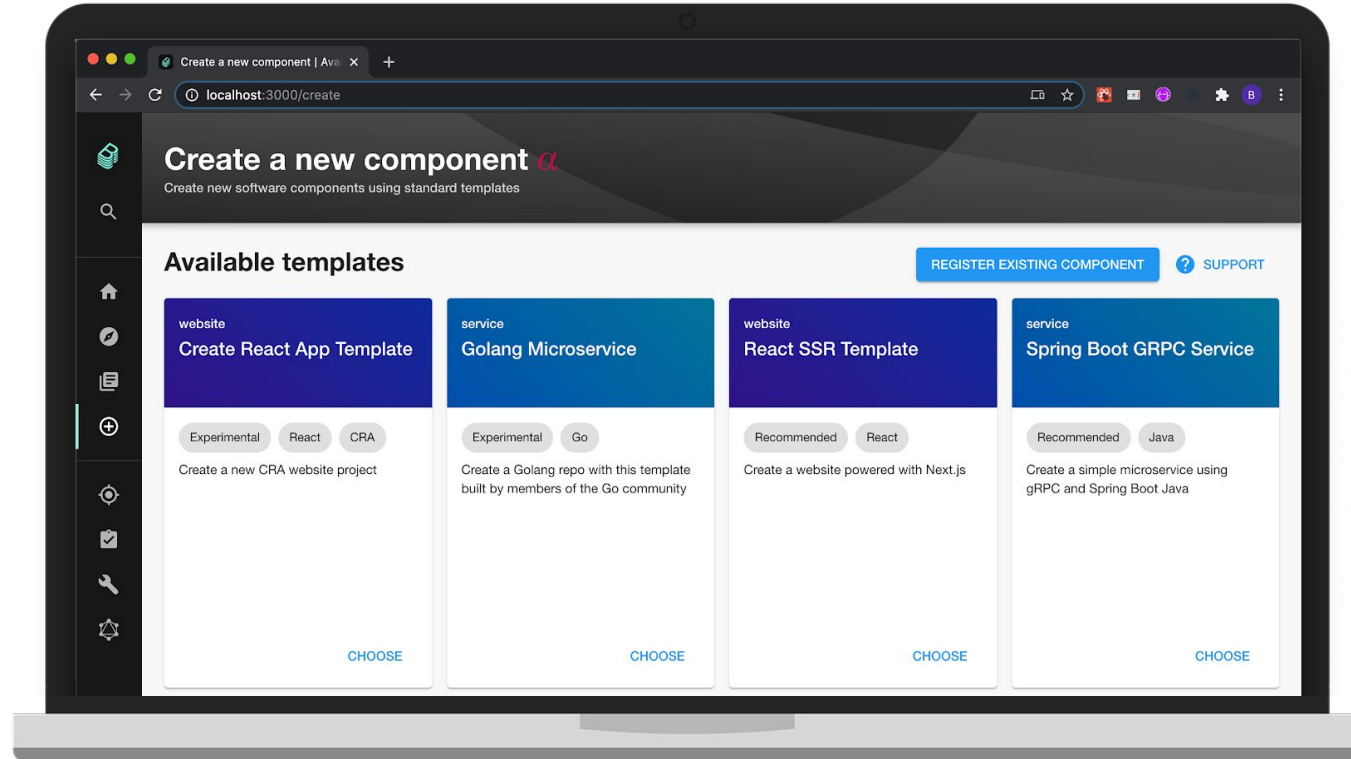

template applications

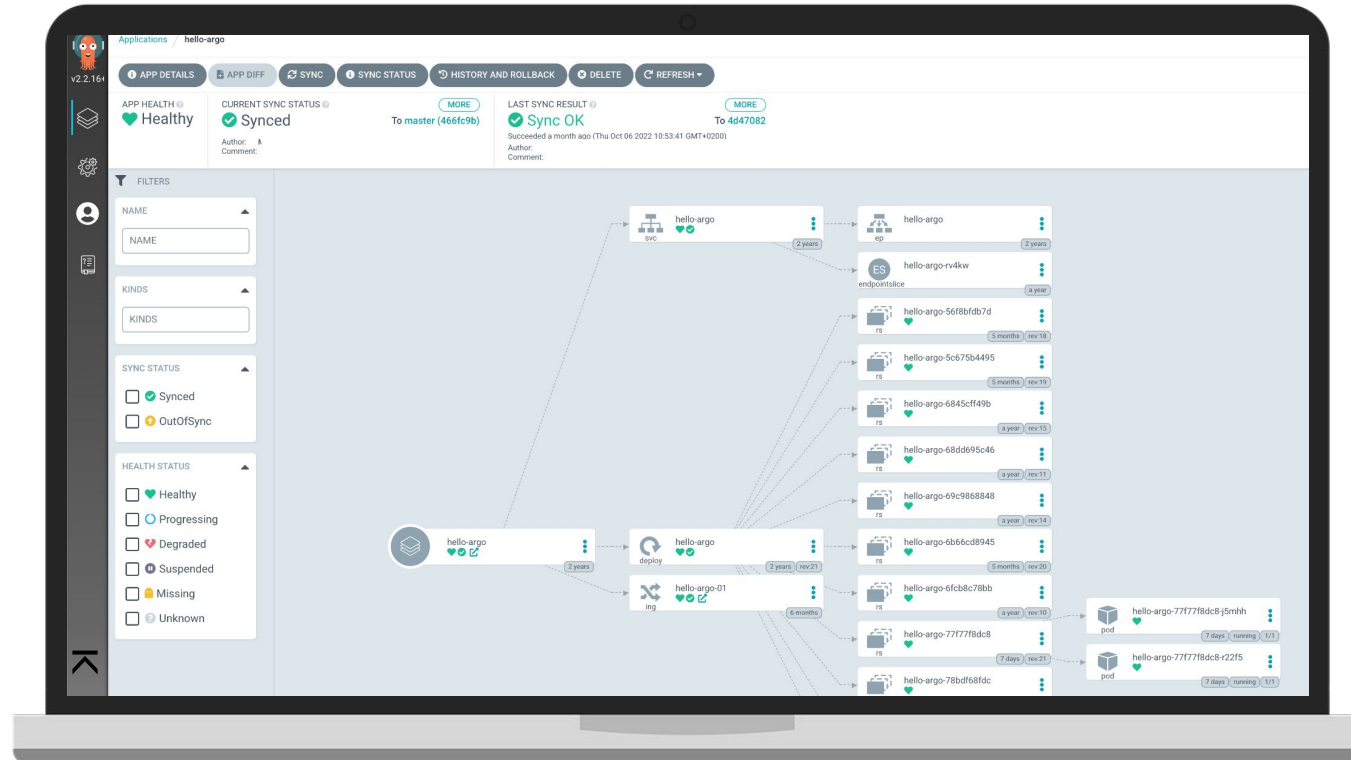

A terminal window with a dark background and light gray text. The window title bar shows 'sol@bigmac:~' and a window icon. The terminal content shows three lines of input and output: a curl command to 'my.awesome.app/health' returning '200 OK', a curl command to 'my.awesome.app/helloworld' returning 'Hello world', and a third line with a tilde and a cursor.

```
sol@bigmac:~  
→ ~ curl my.awesome.app/health  
200 OK  
→ ~ curl my.awesome.app/helloworld  
Hello world  
→ ~
```

GitOps powered by ArgoCD

what did we learn?

- modern DevOps teams are cross-functional and autonomous
- there are challenges with this
- Platform teams solve common problems
- paved roads for the 80%

Platform teams empower developers

Platform teams empower developers

thanks for listening!
